

STABILIS

POWERED BY INDIGO

Stabilis Operator

Full control of running orders and their automatic registration in the ERP system

Stabilis Operator

What Does It Do?

Stabilis Operator takes the integration of workstations with in-house IT systems to the next level using touch screens mounted in operator stations.

With two-way communication, such processes as data entry and approval of completed production orders are fully automated.

Stabilis Operator

How Does It Work?

Integration with the workstation is done over a network (Wi-Fi, Ethernet), without interference with controllers of the machinery and other devices.

The operator intuitively inputs information or confirms their actions on the touch screen. Then, based on the input data, relevant documents and entries in the desired IT systems are created automatically.

Stabilis Operator

Interface:
Intuitive System-User Interaction

Our interface has been designed in line with the latest trends in web application development: it is highly intuitive and user-friendly. Its modular design allows adjustment of the layout and types of displayed information.

Stabilis Operator

Benefits

Cost-efficiency

- Elimination of consumables used up to handle orders in a traditional way (paper).
- Elimination of errors occurring during manual data entry.

Optimisation

- Automated generation of production orders: downloaded from the database and displayed on the operator's dashboard.
- Automated preparation of reports and production sheets.

Effectiveness

- Increased production capacity.
- Fewer activities that need to be performed by the personnel: enhanced work efficiency.
